INTRODUCTION

Busy Lamp Field (BLF) feature allows an end user, such as attendant, to monitor the hook status of a list of users. GXP1628 supports Busy Lamp Field (BLF) feature on both Multi-Purpose Keys and Line Keys on the phone while GXP1620/1625 supports this feature through a Line Keys. This document serves as an end user guide on how to configure Grandstream GXP1620/1625/1628 phones for Busy Lamp Field feature.

To learn more about GXP1620/1625/1628's basic and advanced features, please visit link <http://www.grandstream.com/support> to download the latest "GXP1620/1625/1628 Administration Guide" and "GXP1620/1625/1628 User Guide".

OVERVIEW OF FUNCTIONS

Grandstream GXP1620/1625/1628 IP Phone supports Busy Lamp Filed (BLF) feature. GXP1628 supports this feature by changing the color and status of the MPK indicators, associated with the monitored users, and on the Programmable Line Keys on the phone body. GXP1620/1625 phones support this feature by changing the LED keys color and status on the Line Keys on phone body only.

CONFIGURATION VIA WEB BROWSER

GXP1620/1625/1628 embedded Web server responds to HTTP/HTTPS GET/POST requests. Embedded HTML pages allow a user to configure the IP phone through a Web browser such as Google Chrome, Mozilla Firefox and Microsoft's IE.

To access the Web GUI:

1. Connect the computer to the same network as the phone;
2. Make sure the phone is turned on and shows its IP address. You may check the IP address by pressing Up arrow button when phone is at idle state;
3. Open a Web browser on your computer;
4. Enter the phone's IP address in the address bar of the browser;
5. Enter the administrator's login and password to access the Web Configuration Menu

Note:

- The computer has to be connected to the same sub-network as the phone. This can be easily done by connecting the computer to the same hub or switch as the phone connected to. In absence of a hub/switch (or free ports on the hub/switch), please connect the computer directly to the PC port on the back of the phone;
- If the phone is properly connected to a working Internet connection, the IP address of the phone will display in MENU->Status->Network Status. This address has the format: xxx.xxx.xxx.xxx, where xxx stands for a number from 0-255. Users will need this number to access the Web GUI. For example, if the phone has IP address 192.168.40.154, please enter "http://192.168.40.154" in the address bar of the browser;
- There are two default passwords for the login page:

Table 1: Default Passwords for Login Page

User Level	User	Password	Web Pages Allowed
End User Level	user	123	Only Status and Basic Settings
Administrator Level	admin	admin	Browse all pages

The password is case sensitive with maximum length of 25 characters.

- When changing any settings, always SUBMIT them by pressing the "Save" or "Save and Apply" button on the bottom of the page. If the change is saved only but not applied, after making all the changes, click on the "APPLY" button on top of the page to submit. After submitting the changes in all the Web GUI pages, reboot the phone to have the changes take effect if necessary (All the options under "Accounts" page and "Phonebook" page do not require reboot. Most of the options under "Settings" page do not require reboot).

BLF KEYS CONFIGURATION ON LINE KEYS

To configure the BLF feature on Line Keys for GXP1620/1625/1628 phones:

- On the Web UI, click on "Settings".
- On the drop-down list, select "Programmable Keys", as the figure shows below:

Figure 1: Programmable Keys Settings

- In Line Keys section, Click on the dropdown menu of the key being setup. Scroll down and select "Busy Lamp Field (BLF)".

VISUAL INDICATORS

The phone system is able to notify the end user the hook status of the monitored extension by changing the LED colors.

For example, if the monitored extension is ringing, the BLF indicator status will be changed from solid green to blinking red; and if the monitored extension answers the call, the BLF indicator status will be changed from blinking red to solid red.

The following table shows the BLF indicator status in different scenarios:

Table 2: The BLF Indicators Status in Different Scenarios

Monitored Extension Behavior	BLF Indicator Status (LINE Keys/MPKs on Phone Body)	Extension Board Key Status (On Mounted Extension Board)
Idle	Solid green	Solid green
Placing a call	Solid red	Solid red
Ringing	Blinking red	Blinking red
During a call	Solid red	Solid red
Hold the call	Solid red	Solid red
Monitored extension not registered/BLF subscription failed	Off	Off
