Option 242	X	X	X	✓	✓	✓	X	X	X

Note: The GVC3212 does not support DHCP option 120

INTRODUCTION

Dynamic Host Configuration Protocol (DHCP) is a standardized network protocol used on Internet Protocol (IP) networks for dynamically distributing network configuration parameters, such as IP addresses for interfaces and services. With DHCP, network devices request IP addresses and networking parameters automatically from a DHCP server, reducing the need for a network administrator or a user to configure these settings manually.

DHCP servers can be configured to provide optional data that fully configures TCP/IP on a client. Some of the most common DHCP option types configured and distributed by the DHCP server during leases include default gateway, router, DNS, and WINS parameters.

This guide describes advanced DHCP options supported on Grandstream products. Administrators can use these DHCP options for easy setup, to provide specific configuration per device model, synchronize time with NTP servers, configure ACS server URL on devices and more...

ENVIRONMENT SETUP

This chapter provides steps to setup a minimal test environment to run DHCP options described in this guide using DHCP-server via server manager in Windows server 2012.

Administrators can use other Windows or Linux based DHCP servers at their convenience.

Note: This chapter can be skipped if a DHCP server supporting customizing options is already setup.

Step 1: Install DHCP via Server Manager

Before starting the role installation, make sure the computer has a static IP address. In this guide, we will use Windows Server 2012 with static IP address: 192.168.1.1.

1. Launch the “Add Roles and features Wizard” from the Dashboard on Server Manager, and select “Role based or feature based installation”.
2. After choosing the server from the “server pool”, select **DHCP server** from the roles list and go through the installation steps.
3. The installation will be completed, and the last page of the wizard is the following figure:

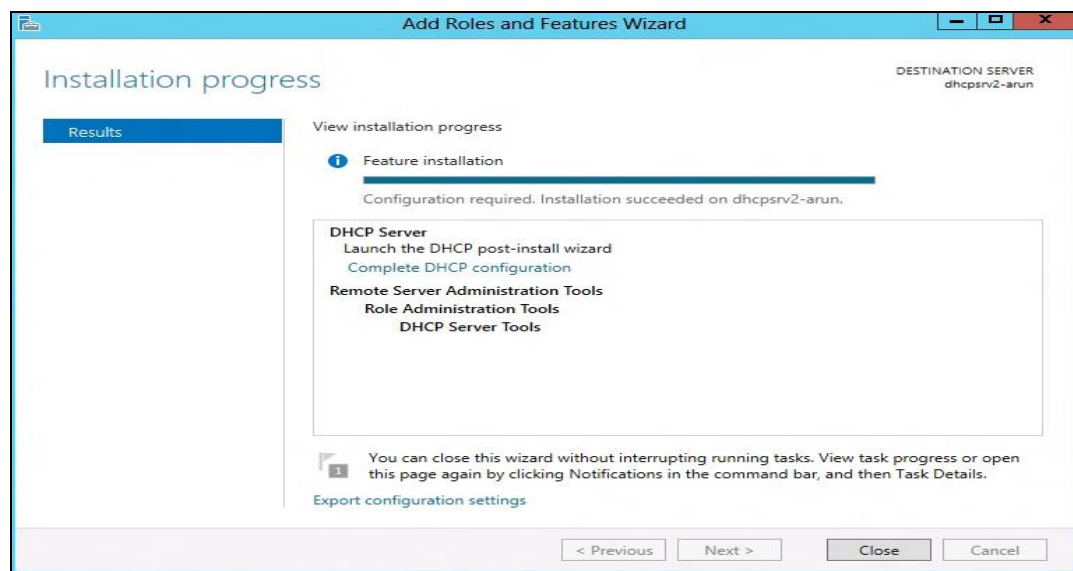

Figure 1: DHCP Role Installation

4. Complete the steps required for the post-install configuration by clicking on “complete DHCP configuration”.

Step 2: DHCP Server Basic Configuration

The first step in the installed DHCP server configuration is to create scopes (Ranges of IP addresses) the administrator wants to lease out to clients.

1. Type: **dhcpcmgmt.msc** Under “Windows Run” to open DHCP Management.

Figure 2: DHCP Management

2. Under the domain name, right click the “IPv4”, and then click on “**New Scope**” to open the New Scope wizard:

The image shows a 'New Scope Wizard' dialog box. At the top, it says 'Scope Name' and provides instructions: 'You have to provide an identifying scope name. You also have the option of providing a description.' Below this, there are two text input fields: 'Name:' and 'Description:'. At the bottom right, there are three buttons: '< Back', 'Next >', and 'Cancel'.

Figure 3: New Scope Wizard

3. Enter the Name of the new scope and its description, and set the range of IP addresses to lease to DHCP clients. Leave the Length 24 by default and click Next.

The image shows the 'Configuration settings for DHCP Server' dialog box. It has two sections. The first section is titled 'Enter the range of addresses that the scope distributes.' and contains two input fields: 'Start IP address:' with the value '192 . 168 . 1 . 10' and 'End IP address:' with the value '192 . 168 . 1 . 200'. The second section is titled 'Configuration settings that propagate to DHCP Client' and contains two input fields: 'Length:' with a spinner box set to '24' and 'Subnet mask:' with the value '255 . 255 . 255 . 0'.

Figure 4: IP Address Range

4. The administrator can configure a restricted range of IP addresses by entering the range in “Add exclusions” and setting the lease duration.
5. If you have a Router (Default gateway), set the router IP address and click Next.

6. Set the domain Name of the DNS server and its IP address, and click Next.
7. Activate the scope by clicking “Yes, I want to activate this scope now”, and click Next.
8. Click on Finish to close the wizard.

Figure 5: Completing the New Scope Wizard

DHCP OPTIONS

To configure the DHCP options, the method includes the following steps:

1. In the DHCP MMC, right-click on IPv4 and select “Set Predefined Options”.

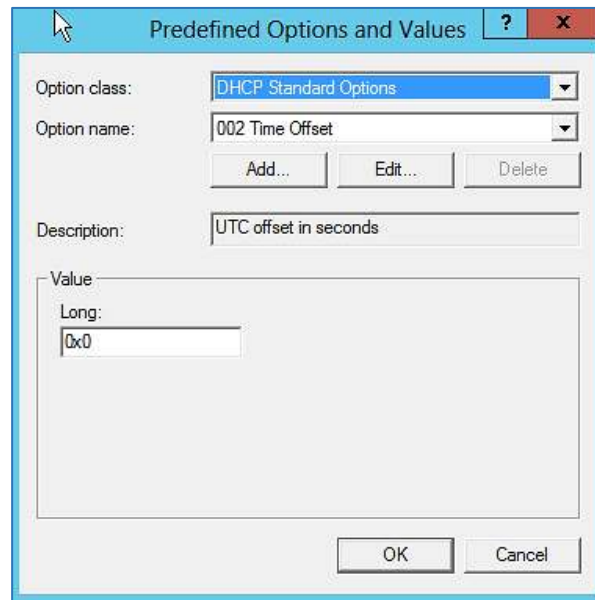

Figure 6: Predefined Options

- **Option Class:** Set the Vendor Class serving to enhance DHCP functionalities (The admin can create a vendor class: *DHCP MMC /IPv4 /Define Vendor Classes*).
 - **Option Name:** Set the option needed.
 - **Add:** Increase the number of options by adding a new one.
 - **Edit:** Modify a specific option.
 - **Value:** Set the value of the chosen option.
2. Just after predefining the options and their values, click on “Server Options” to choose the options.

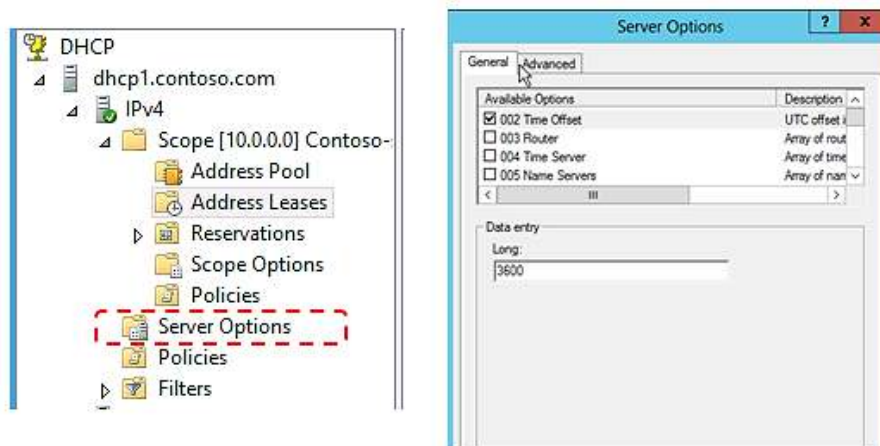

Figure 7 : Server Options

DHCP Option 2 (Time Offset)

Description

DHCP option 2 informs the client about the time zone offset (in seconds).

A positive offset indicates a location east of the zero meridian and a negative offset indicates a location west of the zero meridian.

Please refer to RFC2132 for more details.

Example

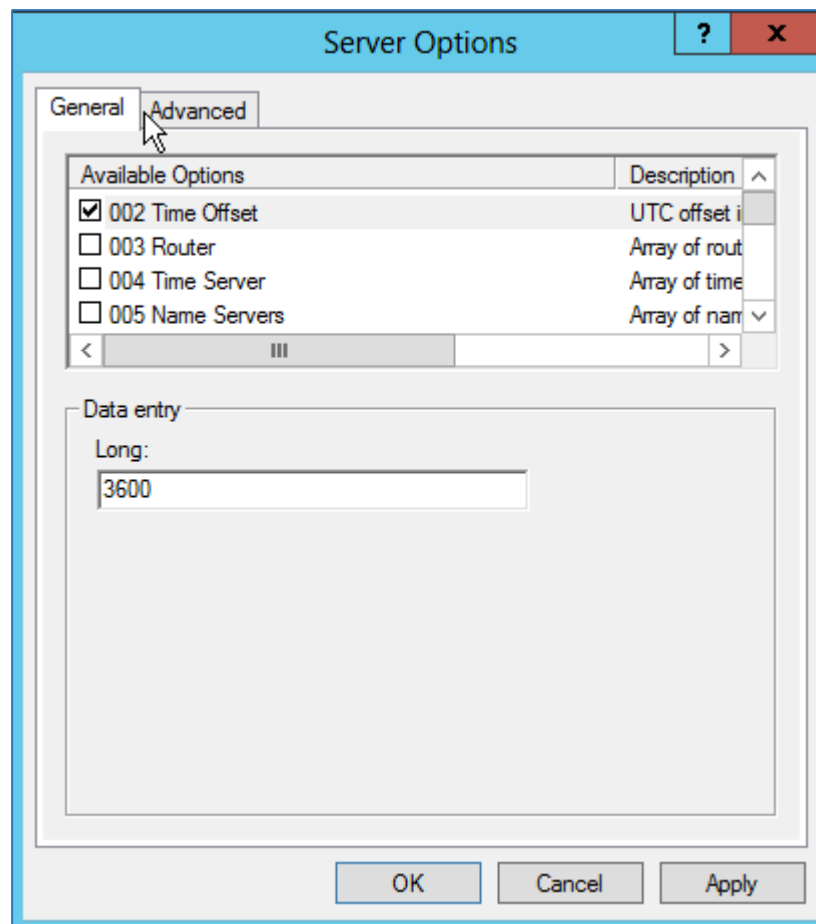

Figure 8: DHCP option 2 (Time offset)

In above example, GMT+1 was set as an offset value
 (one hour * 60 minutes/hour * 60 seconds/minute) = 3600.

To set Pacific Standard Time (GMT-8) for example. This field would be filled with “-28800”. (Eight hours * 60 minutes/hour * 60 seconds/minute).

DHCP Option 42 (NTP Server)

Description

DHCP option 42 specifies a list of NTP servers available to the client by IP address, so that the phone may obtain the date and time from the server.

Please refer to RFC2132 for more details.

Example

Figure 13: DHCP Offer Reply for the Option 42

DHCP Option 66 (TFTP Server Name)

Description

DHCP option 66 provides the IP address or the hostname of a single provisioning server where devices will be redirected to get their configuration files. Without this DHCP option, a manual configuration is requested on each phone the first time it boots.

Please refer to RFC2132/RFC5859 for more details.

Please refer to below link to learn how to provision Grandstream devices:

http://www.grandstream.com/sites/default/files/Resources/gs_provisioning_guide.pdf

Example

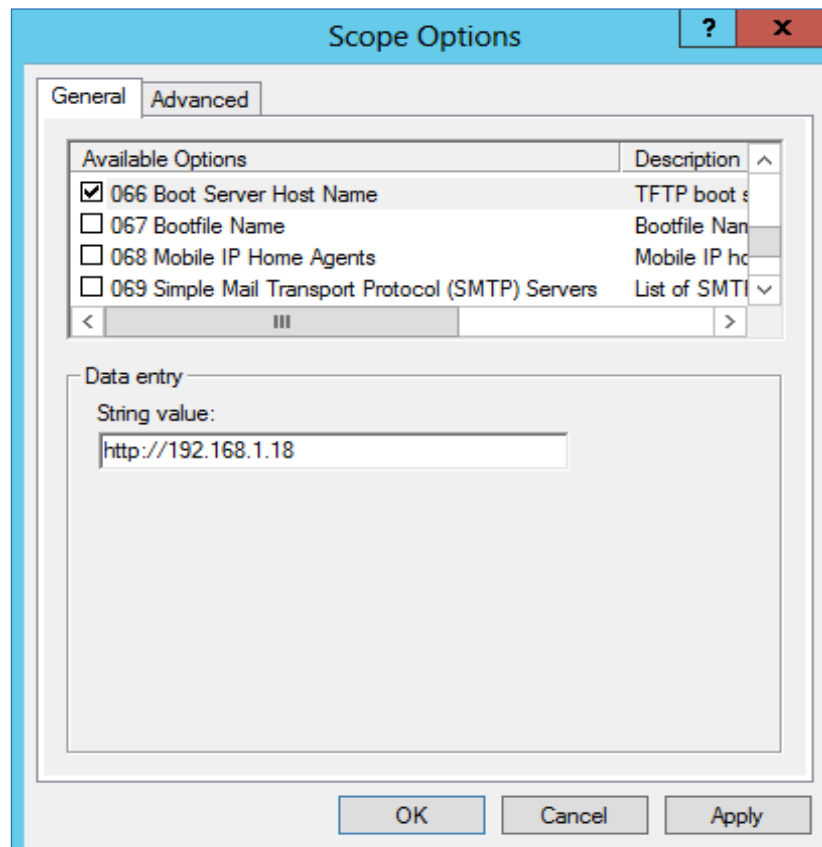

Figure 14: DHCP Option 66

If **http://** is not specified, default TFTP protocol is used for configured server.

Option: (43) Vendor-Specific Information
 Option: (66) TFTP Server Name
 Length: 12
 TFTP Server Name: 192.168.1.18
 Option: (120) SIP Servers

Figure 16: DHCP Offer Reply for the Option 66

DHCP Option 43 (Vendor Specific Information)

Description

This option is used by clients and servers to exchange vendor-specific information.

DHCP server can send one or more vendor specific parameters to clients, encoded in the form **option_code/value_length/value** in hexadecimal format.

Please refer to RFC2132 for more details.

Example

In following example, DHCP server is configured to send CWMP information (ACS URL <http://192.168.1.18>) encapsulated in option 43.

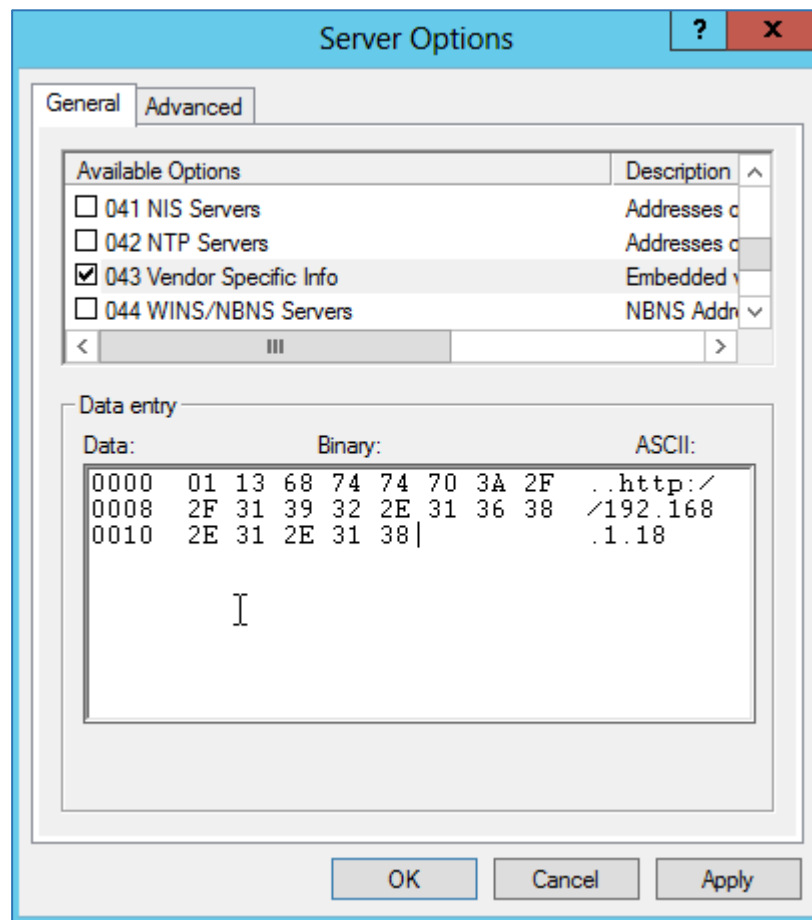

Figure 17: DHCP Option 43

Above DHCP option 43 contains the following:

0x01 (CWMP option for ACS URL)

0x13 (hex of decimal 19 = length of the URL)

19 bytes forming the URL in hexadecimal format (http://192.168.1.18)

 Option: (58) Renewal Time Value

Figure 19: DHCP Offer Reply for the Option 43

DHCP Option 12 (Host Name)

Description

This option specifies the name of the client.

Option 12 is used to identify the client's name against the DHCP server to make special configuration from the server side, this is similar to option 60 and 125.

Please refer to RFC1533/RFC2132 for more details

Screenshots

Below screenshot is taken from GXP2140, the value of Option 12 can be modified from the Phone WebGUI under **Network Settings** → **Basic Settings** → **Host Name**

IPv4 Address DHCP

Figure 21: DHCP Discover Advertisement for Option 12

DHCP Option 60 (Vendor Class Identifier)

Description

Option 60 is used by clients to optionally identify the vendor type and configuration of a DHCP client. When using multiple devices from different vendors, DHCP server can provide specific configuration for each client based on received Option 60.

Please refer to RFC1533/RFC2132 for more details.

Example

In following example, option 60 is configured to identify GXP2170 with its value “Grandstream GXP2170 dslforum.org”.

The first step is to add the option 60 under “**Predefined options and values → Add**”.

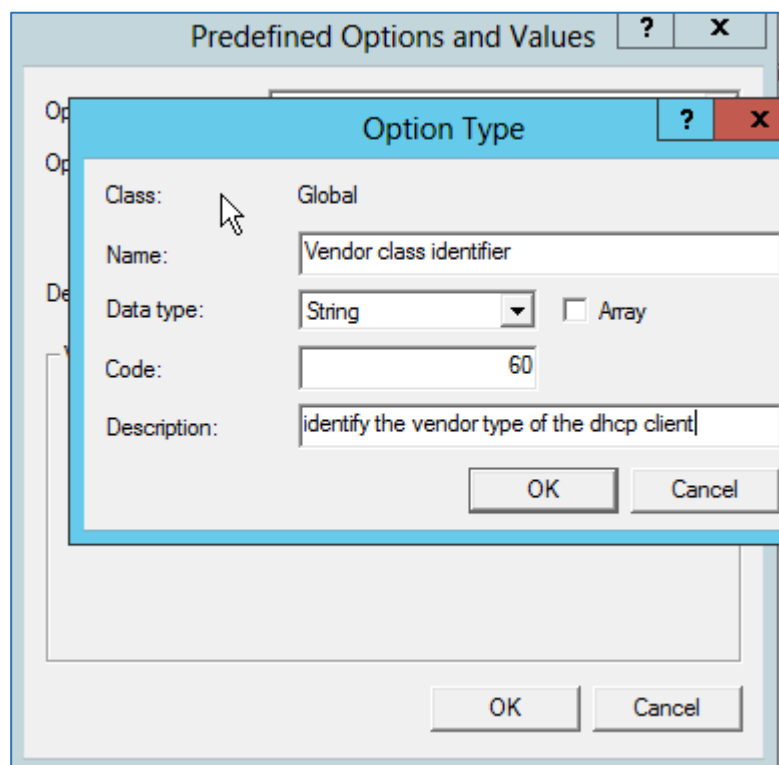

Figure 22: DHCP Option 60 Predefinition

Client packets with configured “option 60” but have no string specified (a string of 0 length) are handled accordingly.

Figure 23: DHCP Discover Advertisement for Option 60

DHCP Option 120 (SIP Server)

Description

The option is used to provide SIP server IP address or FQDN to SIP clients.

Please refer to RFC3361 for more details.

Example

In the following example, the DHCP option 120 is configured by adding and defining a new option under “Predefined Options and Values”.

Figure 24: DHCP Option 120

 Option: (160) Unassigned

Figure 26: DHCP Offer Reply for Option 120

DHCP Option 125 (Vendor-Identifying Vendor Options)

Description

DHCP clients may use this option to identify the vendor that manufactured the hardware on which the client is running the software in use in a unique way.

Option 125 is similar to option 12 & 60 but advertising more parameters of a device:

- **DeviceManufacturerOUI**
- **DeviceSerialNumber** (Grandstream products set DeviceSerialNumber with MAC address)
- **DeviceProductClass**

Please refer to RFC3925 for more details.

Example

Add the option under “Predefined options and values” with data type: Encapsulated.

The screenshot shows a dialog box titled "Change Option Name" with a question mark and a close button (X) in the top right corner. The dialog contains the following fields and controls:

- Class:** Global
- Name:** Vendor Identifying vendor options
- Data type:** Encapsulated (selected in a dropdown menu), with an unchecked checkbox for Array.
- Code:** 125
- Description:** Vendor Identifying vendor options
- Buttons:** OK and Cancel

Figure 27: DHCP Option 125

Screenshots

During DHCP initiation, **DHCP Discover/DHCP Request** including option 125 are sent from client, the server checks **V-I Vendor-specific information**, if matching configured values, specific configuration will be provided to client, otherwise, common configuration is provided to client.

 - Option 125 Suboption: (3) DeviceProductClass
 Length: 7
 DeviceProductClass: GXV3370

Figure 28: DHCP Discover Advertisement for Option 125

Advertised information in above option 125 are:

- DeviceManufacturerOUI = **000b82**
- DeviceSerialNumber = DeviceMACAddress = **000b82XXXXXX**
- DeviceProductClass = **GXV3370**

DHCP Option 132 (Vlan ID)

Description

This option allows to assign a VLAN ID tag to devices during booting stage/DHCP renewal.

Please refer to RFC4578 / IEEE_802.1Q for more details.

Example

- Enable the DHCP VLAN Override by setting it to: “DHCP Option 132 and DHCP Option 133” under the web GUI of your IP Phone supporting the DHCP option 132.
- Disable LLDP because the phone cannot support LLDP and option 132 at the same time as they conflict.

The screenshot shows the 'Ethernet Settings' page. Under the 'IPv4' section, the 'DHCP VLAN Override' dropdown menu is set to 'DHCP Option 132 and DHCP option 133'. Other settings include 'IP Mode' set to 'IPv4 Only', 'Different Networks for Data and VoIP Calls' unchecked, and 'IPv4 Address Type' set to 'DHCP'.

Figure 29: Enable DHCP Option 132 under GXV3370 web GUI

The screenshot shows the 'Advanced Network Settings' page. The 'Enable LLDP' checkbox is checked, which is the step to be disabled according to the example. Other settings include 'DNS Refresh Time (m)' and 'DNS Failure Cache Duration (m)' both set to 0, and 'Preferred DNS 1' and 'Preferred DNS 2' fields.

Figure 30: Disable LLDP under GXV3370 web GUI

- Add the Option 132 under “Predefined options and values” with data type: “String” and select “Array”.

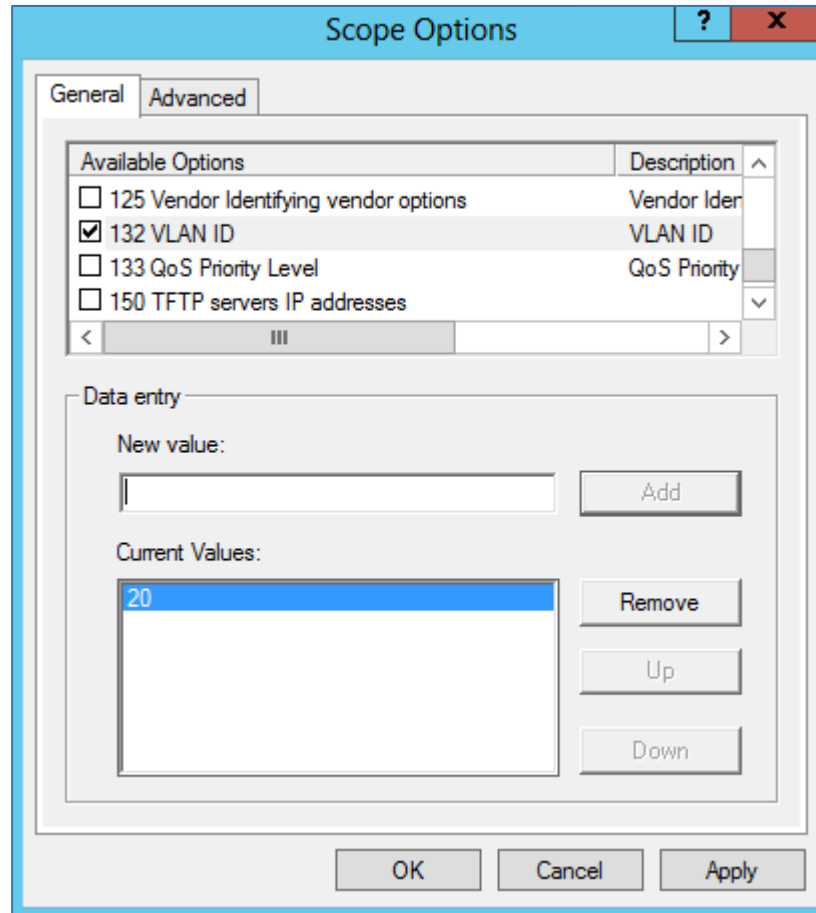

Figure 31: DHCP Option 132

Screenshots

68	5.256	192.168.1.1	192.168.1.16	DHCP	DHCP ACK - Transaction ID 0x8119678
⊕ Option: (120) SIP Servers					
⊖ Option: (132) PXE - undefined (vendor specific) Length: 2 Value: 3230					
⊕ Option: (133) PXE - undefined (vendor specific)					

Figure 33: DHCP Offer Reply for Option 132

In above screenshot, value 3230 is 20 (vlan-id) converted from text to hexadecimal.

Note: After getting VLAN ID from DHCP server and finishing DHCP process, the device will send a second DHCP discover its new assigned VLAN tag to get an IP address on the VLAN range.

DHCP Option 133 (QoS Priority Level)

Description

This option assigns the priority within an Ethernet frame header when using VLAN tag, it specifies a priority value between 0 and 7 to differentiate the traffic priority.

Please refer to RFC4578 / IEEE_P802.1p for more details

Example

- Enable the DHCP VLAN Override by setting it to: “DHCP Option 132 and DHCP Option 133” under the web GUI of your IP Phone supporting the DHCP option 132.
- Disable LLDP because the phone cannot support LLDP and option 132 at the same time as they conflict.

The screenshot shows the 'Ethernet Settings' page. Under the 'IPv4' section, the 'DHCP VLAN Override' dropdown menu is set to 'DHCP Option 132 and DHCP option 133'. Other settings include 'IP Mode' set to 'IPv4 Only', 'Different Networks for Data and VoIP Calls' unchecked, and 'IPv4 Address Type' set to 'DHCP'.

Figure 34: Enable DHCP Option 133 under GXV3370 web GUI

The screenshot shows the 'Advanced Network Settings' page. The 'Enable LLDP' checkbox is checked, indicating that LLDP is disabled. Other settings include 'DNS Refresh Time (m)' and 'DNS Failure Cache Duration (m)' both set to 0, and 'Preferred DNS 1' and 'Preferred DNS 2' fields with IP addresses set to 0.0.0.0.

Figure 35: Disable LLDP under GXV3370 web GUI

- Add the Option 133 under “Predefined options and values” with data type: “String” and select “Array”.

In above screenshot, value 35 is 5 (priority level) converted from text to hexadecimal.

DHCP Option 150 (TFTP Servers List)

Description

DHCP option 150 provides one or more IP addresses of TFTP server(s) where devices will be redirected to download their configuration files. Without this DHCP option, a manual configuration is requested on each phone the first time it boots.

Please refer to RFC5859 for more details.

Please refer to below link to learn how to provision Grandstream devices:

http://www.grandstream.com/sites/default/files/Resources/g_s_provisioning_guide.pdf

Example

Using a GXP Color phone for example, go to the WebGUI under “**Maintenance → Upgrade and Provisioning**”, set the “Additional Override DHCP Option” to Option 150.

The screenshot shows a configuration panel with three settings:

- Allow DHCP Option 43 and Option 66 to Override Server: No Yes
- Additional Override DHCP Option: Option 150 ▼
- Allow DHCP Option 120 to Override SIP Server: No Yes

Figure 39: DHCP Option 150 under the IP Phone web interface

Predefine the option 150 by adding it and setting the IP addresses of the TFTP servers needed by the devices to be configured.

Figure 42: DHCP Offer Reply for Option 150

DHCP Option 160 (Configuration Server Address)

Description

Similar to option 66, DHCP option 160 can provide one or more configuration server(s) to clients to get automatically provisioned. Without this DHCP option, a manual configuration is requested on each phone the first time it boots.

Example

Using a GXP Color phone for example, go to the WebGUI under “**Maintenance → Upgrade and Provisioning**”, set the “Additional Override DHCP Option” to Option 160.

Allow DHCP Option 43 and Option 66 to Override Server No Yes

Additional Override DHCP Option **Option 160** ▼

Allow DHCP Option 120 to Override SIP Server No Yes

DHCP Option 242 (Avaya IP Phones)

Description

Once this option enabled, the phone will use configuration info issued by DHCP sever.

Option 242 can include following parameters:

- MC IP address
- VLAN configuration
- HTTP server, Proxy
- Transport Protocol

Example

Figure 47: DHCP Option 242
