INTRODUCTION

Grandstream GXV3370/3380/3350 IP Multimedia phone supports the BroadWorks Xtended Services Interfaces (Xsi) Directories and Call Log features. This User Guide will describe how to configure and use the BroadWorks Xsi Directories and Call Logs features on GXV3370/3380/3350. To learn more about GXV3370/3380/3350 features, please visit <u>http://www.grandstream.com/support</u> to download the latest "GXV33xx User Guide" and "GXV33xx Administration Guide".

BROADWORKS XTENDED SERVICES INTRODUCTION

BroadWorks Xtended Services Interfaces (Xsi interfaces) are a set of application programming interfaces supporting the integration of BroadWorks functions with remote applications to perform telephony related actions and to be notified about telephony events on the BroadWorks platform. It allows remote applications to send or receive requests for call control, services and also generate events to inform applications about both call and service-related activities. This integration can be done by end users, service providers, or third-party developers.

The Xsi-Actions are a set of RESTful APIs that allows resources to be defined and addressed over HTTP with simple XML. This approach requires less client-side software to be written than other approaches and is the easy choice for developers to create web applications. These APIs allow a remote application to control and query BroadWorks.

Xsi Architecture and Messaging

The Xsi-Action is a Web Application that runs in a container like the BroadWorks Xtended Service Platform (Xsp). Xsi-Action is responsible for authenticating the requests received from the remote applications. It is also responsible for providing request and response mapping and for routing events received from the BroadWorks core.

When an HTTP requests is received from the remote application and successfully authenticated, then the request is processed by the BroadWorks core and an appropriate response is generated.

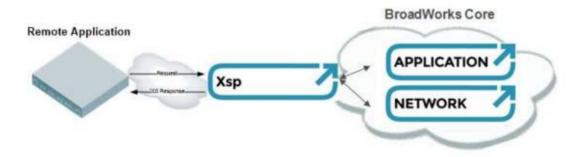

Figure 1: Xsi-Actions Requests Response

The BroadWorks Xsi Directories and Xsi Call Logs feature allows users to access the phonebook and call log entries managed by BroadWorks Servers via the Xsp server.

BROADWORKS XSI DIRECTORY AND CALL LOGS

BroadWorks Server Configuration

The BroadWorks Xsi Directories and Call Logs configuration are provided by the BroadWorks server administrator or service provider. End users will need to request Xsp server URI and user credentials to access the service.

GXV33XX Phone Configuration

Xsi Authentication with BroadWorks User Login Credentials

- 1. Log in Web GUI and register the BroadWorks account on the phone.
- Browse to Value-added Service → Broadsoft Directories to set configuration for BroadWorks Xsi Directories and Call Logs service:
 - Fill the BroadWorks XSP server address in the Server field. If the BroadWorks Xsp server requires to use HTTPS, please add "https://" ahead of BroadWorks Xsp server URI. For example, "https://xsp1.iop1.broadworks.net".
 - Fill the XMPP port number in the **Port** field. The default port number is 80. If the BroadWorks Xsp server requires to use the HTTPS, please fill the HTTPS port number "443" in the field.
 - Fill the BroadWorks Xsi credentials in BroadWorks **User ID** and **Login Password** fields. After configuration from the web UI, the login information will be saved to the app. If some field is left blank, the user can also fill from the app before login.

Xsi Authentication with SIP Authentication Credentials

- 1. Log in Web GUI and register the BroadWorks account on GXV phone.
- Browse to Value-added Service → Broadsoft Directories to set configuration for BroadWorks Xsi Directories and Call Logs service:
 - Fill the BroadWorks XSP server address in the Server field. If the BroadWorks Xsp server requires to use the HTTPS, please add the header "https://" ahead of BroadWorks Xsp server URI. For example, "<u>https://xsp1.iop1.broadworks.net</u>".
 - Fill the XMPP port number in the Port field. The default port number is 80. If the BroadWorks Xsp server requires to use the HTTPS, please fill the HTTPS port number "443" in the field.
 - Fill the SIP Authentication ID, BroadWorks User ID and Password fields. After configuration from the web UI, the login information will be saved to the app. Click the "BS Xsi" app to automatically login. If some field is left blank or the credential is incorrect, a login failure interface will be displayed, and the user needs to re-configure from web UI.

Xsi Network Directories

Under **Network Directories** tab, the user can choose to enable or disable certain **Directory** or **Call Log** categories. A custom name can be assigned to each directory or call log category. If the user types a value into the **Name** field, it will override the default name. For example, the Group Directory's default name is "Group." If the user fills "Grandstream" into the field, the phone will display "Grandstream" for the **Group Directory**. The following figure shows an example of how to configure the Broadsoft Xsi Directories and Call Log settings on the GXV3370/3380/3350 phones.

BroadSoft Directories			
KSI Service Settings Network	k Directories

Placed Call Log	Enabled	× .	
Received Call Log	Enabled	× .	

Figure 6: Broadsoft Xsi Network Directories Types and Names

BroadWorks Xsi Directories

After configuring the phone as the steps above, users can use Broadsoft Xsi Directories features on the GXV series phones. Please do as the following steps:

1. On the phone idle screen or menu, open BS XSI app by tapping on icon.

					惶 17:

Figure 8: BroadWorks Contacts Page

Note: Users can enter different contact category pages by swiping the screen vertically. The contact category pages from top to bottom are: Personal, Group Common, Group, Enterprise Common, and Enterprise.

3. If the user disables any directory from device web UI, the category would not be displayed. For example, "Group Common" is not enabled in the BS Contact page below.

Figure 14: BroadWorks Call History Page

Users can enter different Call History pages by selecting a category on the left. The **Call History** categories from top to bottom are: **All, Missed**, **Outgoing**, and **Incoming**.

- If the Call History page displays "Request error, recheck configuration," please check the BroadWorks Xsi configuration, or request technical assistance from the service provider. If the Call History page is not shown, please enable the contact category on the Web UI → Value-added Service → Broadsoft Directories → Network Directories.
- 4. When entering the Broadsoft Call History page, the phone will send queries to the server to download the BroadWorks Xsi call histories and display accordingly. Each entry will display with the date and time. GXV3370/3380/3350 can also adjust and display the time according to the time zone settings.
- 5. Enter the Call Log category page and tap the icon at the right side of the selected log to make a call to the contact using the first account.

If the call log number displays as the format of "xxxxx-xxx", the first set of digits before the "-" is the PSTN number and the digits after the "-" is the extension number. For this type of entry, the phone

allows user to choose the number for dialing after tapping the 🔪 icon.

6. GXV3370/3380/3350 can sort the BroadWorks Call Logs by name or time. By default, the call logs are displayed in chronological order with the most recent call first.

Users also can sort the logs by name by tapping 11 at the upper right corner of the screen and select the call log based on time or name.
